

# **S.B. SYSTEM**

**RETARDED FLOATING SYSTEM**

**MOD. 413 R**

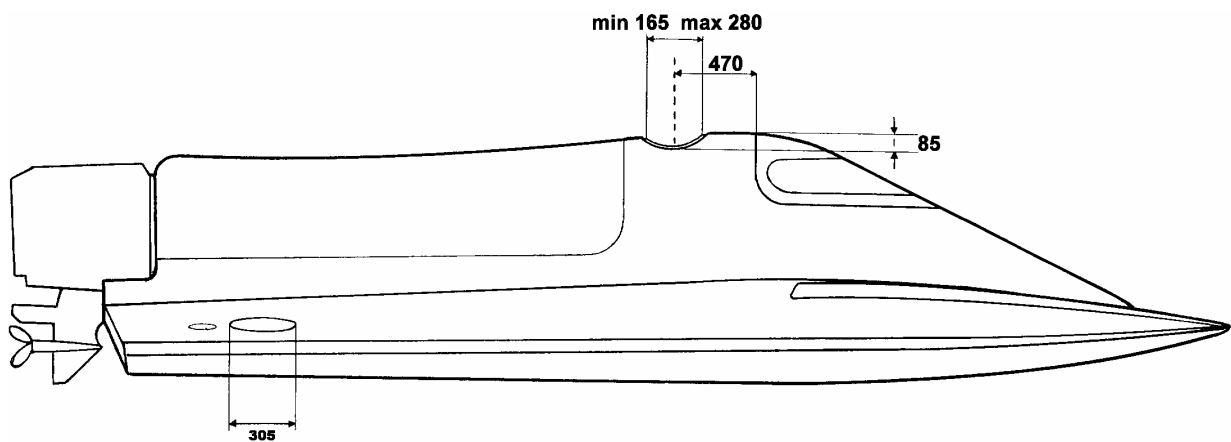

## **INTRODUCTION**

*P/N 6101/1 1 -2000*

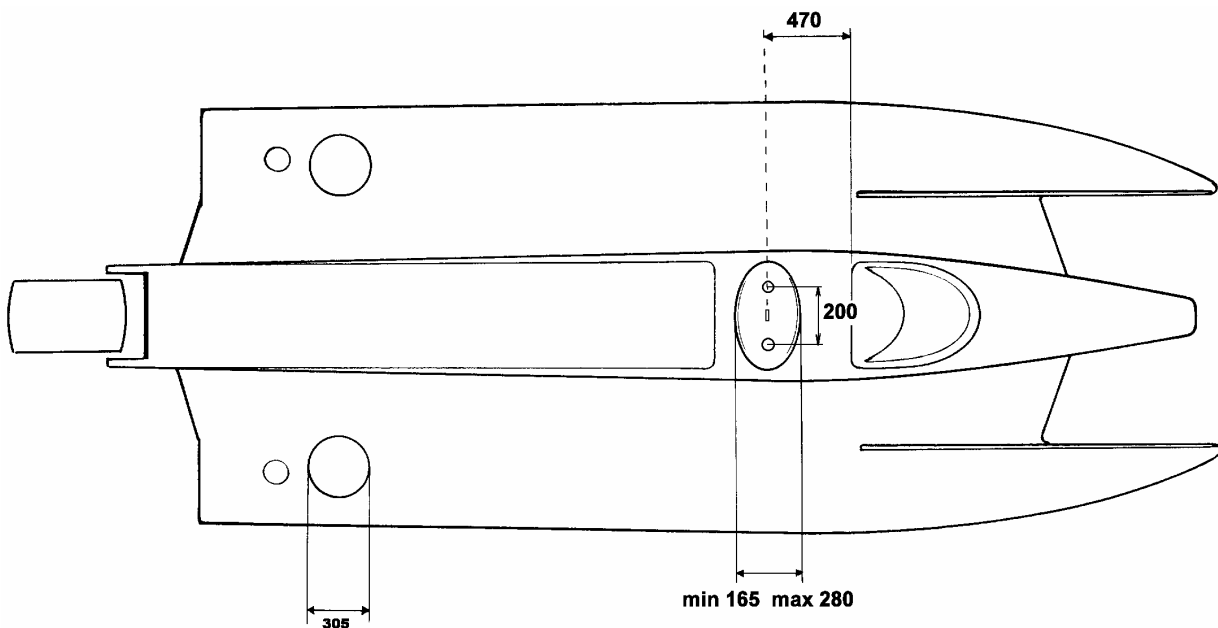

*English*

**The following instructions serve to prepare the competition catamarans of F1, F2, F3 and F4 already existing and new, of the different boat builders to install of the Retarded Floating System S.B. System Mod. 413 R**

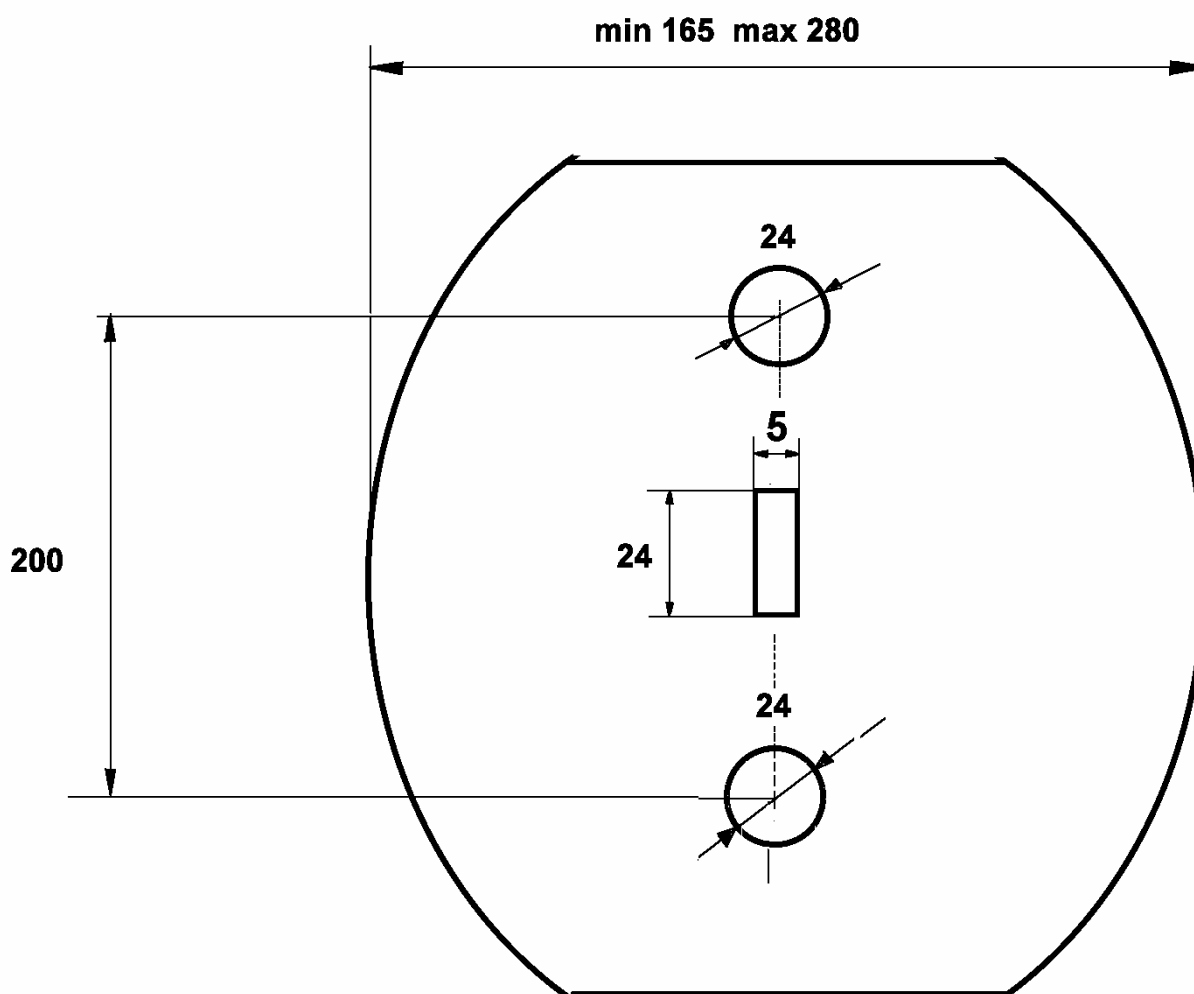

The cells of safety of the boats must have in the superior part placed a floating balloon housing the shoulders of the driver to be able to put the floating balloon and some holes has to be done in the rear part of the decks how in the figures following.

**Side view**

**Top view**

### Dimensions and measures of the floating balloon housing

The measures of the drawings must be respected for the proper inflating of the balloon.

For the boats of F1, F2 and F3 BURGESS and MOLGAARD the S.B. System supplies as additional Kit the floating balloon housing for the balloon to be inserted in the security cell.

For the DAC RACING boats produced as of 1994 the floating balloon housing is already supplemented in the security cell and for the ones produced from 1998 the holes and the corks are present hips in the rear part of the deck.

The following items of the S.B. System: the Nitrogen Cylinder and the valve to High Pressure, after the working in case of reversal of the boat, it has to be replaced to be reproduced, this service is managed by operators for the different Formulae which will be present on the race place with the spare parts necessary to reactivate the system. The names and the addresses are in the following pages
